

# BusinessInternet

Viacloud BusinessInternet is ideal for high bandwidth internet service applications to support large businesses with large number of users. This is a symmetric link over wireless technology and provides your Business with an internet connection that is flexible, secure, and scalable to meet your changing requirements.

## Key Benefits

- Symmetric (Upload/Download)
- Delivery on Wireless
- On-Demand Bandwidth Option
- Secure Connection
- High Bandwidth Packages
- In-Built User Profiling
- Save upto 70% on bills

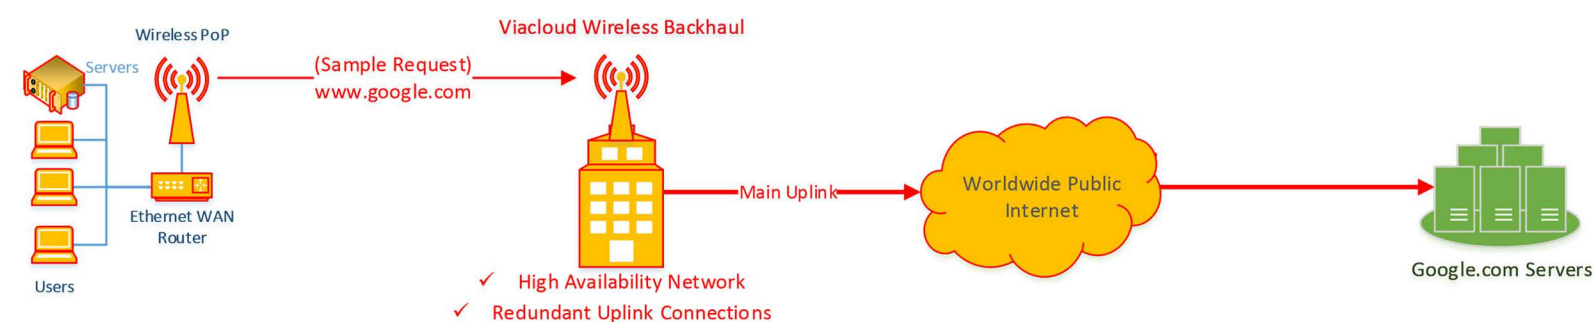

# BusinessInternet

## How does it work?

Viacloud BusinessInternet is a wireless technology based internet service. We deliver a high bandwidth wireless link from our point of presence (POP) to your office. Once this link is in place, we then provision the required additional hardware and cabling to provision the service.

The service is provided as an ethernet based WAN connection and connects to your WAN router. This solution is inherently designed to be a managed service where Viacloud team takes care of user profiling and ensuring each team gets the right access level and speed to the internet along with managing firewalls, vpns, and quality of service enforcement.

Give your Business managed blazing fast internet
