

BusinessPBX

Viacloud BusinessPBX is a cloud based PBX solution for business communication network in offices. With BusinessPBX, there is no need to for a hardware unit (PBX) required at your office and this makes BusinessPBX ideal for any size of business, particularly between 2 to 100 users. We provide high end Business series IP phones, using which calls can be made as usual without any special prefix or programming requirements.

Key Benefits

- Opex Model
- Pay Per Extension
- Hassle Free Migration
- No Infrastructure challenges
- Premium Quality
- Save on Local & International Calls
- Save upto 50% on bills

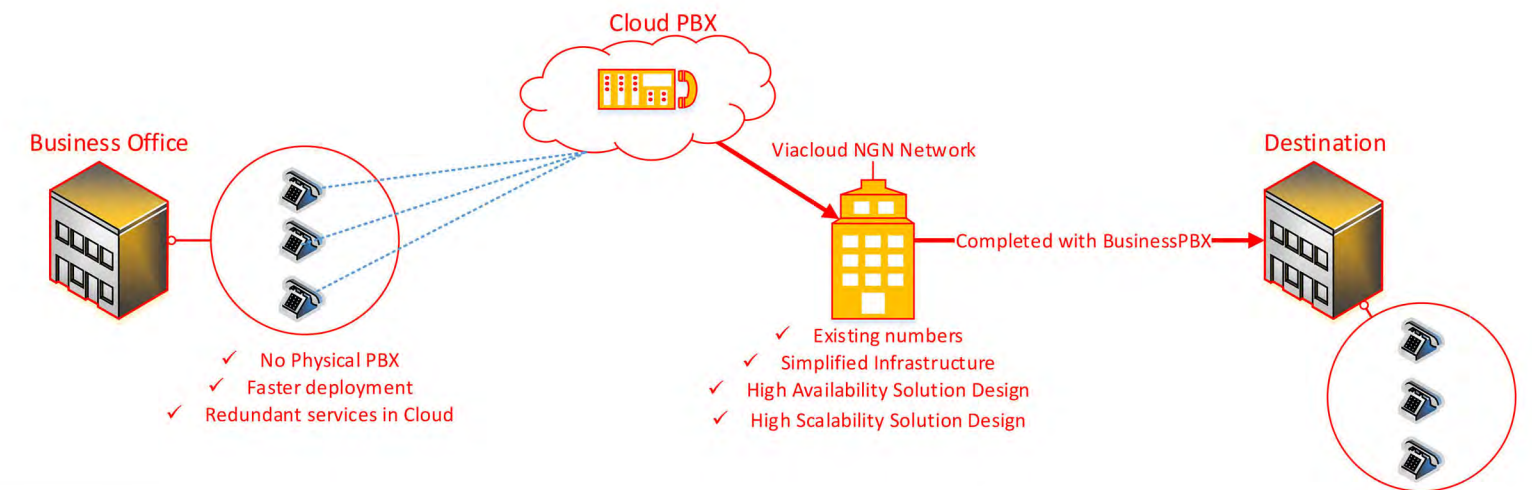

BusinessPBX

How does it work?

Viacloud BusinessPBX is an end user phone system managed by a central PBX unit located in the cloud.

While designing your solution, we evaluate your current office infrastructure and prepare a migration plan if required to ensure seamless operation while this service is deployed.

Once the service is activated, all calls made from your IP phones are sent to the cloud PBX, and are delivered to the destination over our Next Generation Network (NGN).

Give your Business Communication
Freedom from Infrastructure
