BusinessDSL

How does it work?

Viacloud BusinessDSL is an ADSL based internet service. We work with Batelco in partnership to delivery a high quality connection to your office. The service is deployed over Batelco phone lines and can be activated as a new connection or transferred as an existing connection.

All lines come with a broadband wifi router. This solution can be provided as a managed service where Viacloud team takes care of unified threat management along with the firewalls, vpns, and quality of service enforcement.
